

# TABLE OF CONTENTS

Personnel	vii
Publications and Reports	xii
Introduction	xix
I. Physical Electronics	1
Physical Electronics in the Solid State	1
Characteristics of Semiconductor Junctions	1
Electron Emission and Cesium Plasma	2
Thermionic Energy Converters	2
II. Plasma Dynamics	12
Plasma Physics	12
Magneto-ambipolar Plasmas	13
Synchrotron Radiation Loss from a Hot Plasma	15
Cesium Plasma	20
Heat Transport in Plasmas	21
Plasma Electronics	26
Electron-Beam Stimulated Plasma Oscillation	27
Propagation between Parallel Plates Filled with a Gyroelectric Medium Transverse to the Static Magnetic Field	35
Propagation in Plasma Waveguides	39
Covariant Formulation for Wave Motions in a Plasma	41
Plasma Magnetohydrodynamics and Energy Conversion	59
III. Solid State Physics	60
A Simple Transistor-Operated Oven-Temperature Regulator	61
Soft X-ray Detection by Means of Be-Cu Photomultipliers	62
Elastic Constants of Cadmium Single Crystals	65
Recombination of Electrons and Donors in Germanium	66
IV. Low Temperature Physics	71
V. Thermoelectric Processes and Materials	72
Mercury Telluride Evaluation	73
Thermoelectric Temperature Control of Electronic Components	73
Transport of Contact Materials in Bismuth Telluride	74
Thermal Conductivity Studies	75

## CONTENTS

VI.	Microwave Spectroscopy	79
	Ruby Frequency Standard	79
	Spin-Lattice Relaxation	81
	Maser Circuits with Negative L and C	83
	A Secondary Standard for Electron Paramagnetic- Resonance Experiments	88
VII.	Nuclear Magnetic Resonance and Hyperfine Structure	89
	Isotope Shift in the Spectrum of Cesium	89
	Atomic-Beam Absorption Cell	90
	Mechanical Improvements in a High-Power Microwave Attenuator	90
	Hyperfine Structure of $\text{Hg}^{201}$ in Zero Field	91
	Hyperfine Structure of the $^3\text{P}_1$ State of Mercury	92
VIII.	Microwave Electronics	93
	Broadband-Buncher Klystron	93
	Space-Charge Mode Theory of Multicavity Klystrons	98
	The X-line Slow-Wave Structure	104
IX.	Atomic Beams	108
	Doppler-Cancellation Technique for Determining the Altitude Dependence of Gravitational Red Shift in an Earth Satellite	108
X.	Stroboscopic Research	112
XI.	Modulation Theory and Systems	113
	Signal-to-Noise Ratios in a Limiter with Feedforward	113
XII.	Statistical Communication Theory	116
	Characterization of Random Signals with an Application to Nonstationary Linear Systems	117
	Gravitational Fields	125
	Realizability of Nonlinear Filters and Feedback Systems	137
XIII.	Process Analysis and Synthesis	144

## CONTENTS

XIV.	Processing and Transmission of Information	146
	Noisy Feedback Coding	147
	Encoding and Error-Correction Procedures for the Bose-Chaudhuri Codes	149
	Receivers for Noisy Dispersive Channels	150
	Maximal Power Gain in a Diodeless Magnetic Pulse Amplifier with the Use of Multiple-Aperture Cores	151
	Unilateral Iterative Networks with Memory	152
	Extraction of Information for a Pair of Periodically Varying Random Waveforms	154
	A Mechanical Hand	156
XV.	Artificial Intelligence	158
	The LISP Programming System	158
	The Advice Taker	159
	Theory of Computation	159
	Chess	160
	Integration	161
XVI.	Statistical Thermodynamics	162
	The Geometrical Interpretation of the Thermostatic Stability Conditions	162
XVII.	Physical Acoustics	167
	Scattering of Sound by Sound	167
XVIII.	Speech Communication	172
	Formant Bandwidth and Vowel Preference	172
	High-Speed Motion-Picture Study of the Movement of the Lips	174
XIX.	Signal Detection by Human Observers	181
	The Detection of a Pulsed Sinusoid of Uncertain Frequency	181
XX.	Mechanical Translation	183
	The German Noun Phrase	183
	The Ergative Relation in Hidatsa	184
XXI.	Communications Biophysics	187
	Firing Patterns of Single Cells in the Auditory Cortex	189

## CONTENTS

XXII.	Neurophysiology	193
	On Parallel Computation	194
	Structure of Water in Biological Tissue	195
XXIII.	Circuit Theory	198
	Inert Transformations and Network Constraints	198
	Low-Order Frequency Multipliers	203
XXIV.	Noise in Electron Devices	205
	Measurement of Absolute Noise Performance of Parametric Amplifiers	205
XXV.	Network Synthesis	213
	On the Analysis and Synthesis of Single-Element-Kind Networks	213
	The Normal-Coordinate Transformation of a Linear System with an Arbitrary Loss Function	235
	Matrix Synthesis of Two-Element-Kind Driving-Point Impedances	245
XXVI.	Linguistics	255
